

RESOURCES: COEXISTING WITH COYOTES

CoyoteSmart – CoyoteSmart – coexisting safely and sustainably

CoyoteSmarts is a public information initiative of a group of Rhode Island organizations that have come together to address the growing presence of coyotes on Aquidneck and Conanicut Islands—and in other communities throughout the state.

Narragansett Bay Coyote Study – The Conservation Agency

Since 2004 The Narragansett Bay Coyote Study (NBCS) has been developing science-based coexistence and management strategies for our newest top predator.

The Conservation Agency: Coyote Best Management Practices

Report prepared by Numi Mitchell, Ph.D., Lead Scientist, Narragansett Bay Coyote Study with the endorsement of the Rhode Island DEM and the Potter League for Animals, January 5, 2010, as revised February 27, 2017 on best management practices for coexistence with coyotes on Aquidneck and Conanicut Islands.

Confluence and Implications of Cats, Coyotes Journal Paper

This study examines the effects of feeding regimes on the interactions between feral domestic cats and wildlife (coyotes, raccoons, and skunks) at a Trap-Neuter-Return (TNR) cat colony in Rhode Island.

Community Coyote Reports – The Conservation Agency

NBCS is providing an interactive map of all coyote reports received. You can report your sightings – of interest or concern – with the online Sightings Form. Sightings of coyotes in the wild are always appreciated.
